WE USE A GENERAL MEDICAL MODEL—NOT A TYPICAL PSYCHIATRIC SETUP.

Upon check-in, the patient is brought to a room by a nurse for vital signs, medical reconciliation and a possible urine screen. The patient stays in their room as our healthcare providers move from room to room to see each patient. This practice method allows us to maximize each appointment time and provide comprehensive, innovative, integrated behavioral medicine to meet the wide range of needs for each individual patient.

WE TREAT APPROXIMATELY 3,000 PSYCHIATRIC PATIENTS PER MONTH.

Many patients receiving psychiatric care have a difficult time establishing care with a primary care provider due to their mental health needs. Our onsite Family Practice Nurse Practitioner sees patients who meet the following criteria: patients using Suboxone, gender identity issues, past drug abuse, past or current need of rehabilitation, or severe behavioral health issues.

WE OFFER A RANGE OF SERVICES IN OUR INNOVATIVE INTEGRATION MODEL.

During our treatment process, we offer a wide range of services to our patients. Our services include: quotient ADHD testing, genetic testing, neurological history, perinatal psychiatry, Suboxone provider, numerous research studies, onsite crisis intervention, and extensive case management support.

MORTALITY RATE HIGHER IN PATIENTS WITH MENTAL HEALTH DISORDERS

The following are diagnostic groups with raised mortality from natural causes:

- Substance misuse (drugs and alcohol)
- Mental retardation
- Eating disorders
- Schizophrenia and other psychoses
- Affective disorders including depression

“The Poor Physical Health of People with Mental Illness” BMJ Publishing Group. 2001

“Physical health is inextricably linked to mental health, and physical illness may cause psychiatric symptoms. At the very least, physical illness is likely to exacerbate psychiatric symptoms, such as anxiety and depression, in patients with mental health problems. Therefore, assessment and management of physical health in the population are essential.”

According to Missouri DSS, an estimated 163,200 Missourians covered by Medicaid qualify for services due to a “physical or mental impairment, disease, or loss which keeps them from working in any job within their skill level for 12 months or longer.”
